One IFEval prompt, Gemma-2-9b-it. Each point is a candidate answer (green: correct, red: incorrect). The vertical axis is the model's own validator.

Left, raw score. No relation to the validator ($\rho = -0.24$).

Middle, corrected, no training. Most of the agreement appears ($\rho = 0.64$).

Right, after FLORA. Tighter still ($\rho = 0.75$).
